NEW QUESTION: 3Refer the exhibit. Which statement about VPC member ports on this switch is true?
A. VPC ports are error disabled
B. VPC ports are suspended
C. Only orphan stay operational
D. VPC port status remains unchanged
Answer: B

NEW QUESTION: 4Which three statements about the route preference of IS-IS are true? (Choose three.)
A. An L2 path is preferred over an L1 path.
B. The Cisco IS-IS implementation usually performs equal cost path load balancing on up to eight paths.
C. Within each level, a path that supports optional metrics is preferred over a path that supports only the default metric.
D. Within each level of metric support, the path with the lowest metric is preferred.
E. An L1 path is preferred over an L2 path.
F. Both L1 and L2 routes will be installed in the routing table at the same time.
Answer: C,D,E
Explanation:Explanation/Reference:Explanation:Given multiple possible routes to a particular destination, an L1 path is preferred over an L2 path. Within each level, a path that supports the optional metrics is preferred over a path that

supports only the default metric. (Again, Cisco supports only the default metric, so the second order of preference is not relevant to Cisco routers.) Within each level of metric support, the path with the lowest metric is preferred. If multiple equal-cost, equal-level paths are found by the Decision process, they are all entered into the route table. The Cisco IS-IS implementation usually performs equal-cost load balancing on up to six paths. Reference: <http://www.realccielab.org/operation-of-integrated-is-is.html>
