NEW QUESTION: 1A BizTalk Server 2010 orchestration consumes a Microsoft Windows Communication Foundation (WCF) service. A request-response call to the WCF service is made inside a non-transactional scope. The scope has an exception handler that has its Exception Object Type property set to the type of the fault operation returned from the service. The handler receives the fault message. The WCF service throws a typed fault exception named WidgetException. You need to extract the exceptions detail node from the fault message. What should you do in the WCF send port configuration?**A.** Set the Propagate Fault Message option to True. Specify the source of the outbound WCF message body by selecting Template. In the XML expression box, enter the XML of the WidgetException message.**B.** Set the Propagate Fault Message option to True. Specify the source of the inbound BizTalk message body by selecting Envelope (soap:Envelope).**C.** Set the Propagate Fault Message option to True. Specify the source of the inbound BizTalk message body by selecting Path and entering the XPath expression for the WidgetException node.**D.** Set the Propagate Fault Message option to True. Specify the source of the inbound WCF message body by selecting BizTalk Request Message Body.**Answer: C**

NEW QUESTION: 2Which of the following are some of the key responsibilities for system administrators?There are 3 correct answers to this question.**A.** Configure of the system before Go-Live and after Go-Live**B.** Define master data relevant for your sales process**C.** Handle incidents created by end users**D.** Adjust system parameters based on evolving company needs **E.** Adjust server parameters based on business needs**Answer: A,C,D**

NEW QUESTION: 3Subscription 1という名前のAzureサブスクリプションがあります。Subscription1で、share1という名前のAzureファイル共有を作成します。次の図に示すように、SAS1という名前の共有アクセス署名 (SAS) を作成します。回答するには、回答エリアで適切なオプションを選択します。注：それぞれの正しい選択には1ポイントの価値があります。**Answer:** Explanation:

NEW QUESTION: 4Who vouches for the binding between the data items in a digital certificate?**A.** Certification authority**B.** Issuing authority**C.** Registration authority**D.** Vouching authority**Answer: A**Explanation:A certification authority (CA) is an entity that issues digital certificates (especiallyX.509 certificates) and vouches for the binding between the data items in a certificate. An issuing authority could be considered a correct answer, but not the best answer, since it is too generic.Source: SHIREY, Robert W., RFC2828: Internet Security Glossary, may 2000.
