Pass Managing Microsoft Teams Certification with Best Practice Exam Questions, If you have a MS-700 certification you can nearly survive in any country.

NEW QUESTION: 1You are running a Linux guest in Azure Infrastructure-as-a-Service (IaaS). You must run a daily maintenance task. The maintenance task requires native BASH commands. You need to configure Azure Automation to perform this task. Which three actions should you perform? Each correct answer presents part of the solution. **A.** Create an automation account. **B.** Create an asset credential. **C.** Import the SSH PowerShell Module. **D.** Create an Orchestrator runbook. **E.** Run the Invoke-Workflow Azure PowerShell cmdlet. **Answer: A,B,C** **Explanation:** A: An Automation Account is a container for your Azure Automation resources: it provides a way to separate your environments or further organize your workflows. To create An Automation Account 1 . Log in to the Azure Management Portal. 2 . In the Management Portal, click Create an Automation Account. 3 . On the Add a New Automation Account page, enter a name and pick a region for the account. C: * Asset credentials are either a username and password combination that can be used with Windows PowerShell commands or a certificate that is uploaded to Azure Automation. * The Assets page in Automation displays the various resources (also called "settings") that are globally available to be used in or associated with a runbook, plus commands to import an integration module, add a new asset, or delete an asset. Assets include variables, schedules, credentials, and connections. NEW QUESTION: 2 Which of the following types of jailbreaking allows user-level access but does not allow iBoot-level access? **A.** Sandbox Exploit **B.** iBoot Exploit **C.** Userland Exploit **D.** Bootrom Exploit **Answer: C**

NEW QUESTION: 3 NTP allows you to set the clocks on your systems very accurately, to within 100ms and sometimes-even 10ms. Knowing the exact time is extremely important for enterprise security. Various security protocols depend on an accurate source of time information in order to prevent "playback" attacks. These protocols tag their communications with the current time, to prevent attackers from replaying the same communications, e.g., a login/password interaction or even an entire communication, at a later date. One can circumvent this tagging, if the clock can be set back to the time the communication was recorded. An attacker attempts to try corrupting the clocks on devices on your network. You run Wireshark to detect the NTP traffic to see if there are any irregularities on the network. What port number you should enable in Wireshark display filter to view NTP packets? **A.** TCP Port 126 **B.** UDP Port 125 **C.** UDP Port 123 **D.** TCP Port 124 **Answer: C**
