NEW QUESTION: 1 Network scanning is used to identify the available network resources. Which one of the following is also known as a half-open scan, because a full TCP connection is never completed and it is used to determine which ports are open and listening on a target device?
A. TCP Connect Scan **B.** SYN Scan **C.** Null Scan **D.** XMAS Scan
Answer: B

NEW QUESTION: 2 A network engineer is using OTV to connect six data centers. Which option is preferred when deploying OTV to more than three sites?
A. Filter MAC addresses at the join interface **B.** Avoid multihoming **C.** Use multicast-enabled transport **D.** Use unicast-only transport
Answer: C

NEW QUESTION: 3 Which of the following features can be configured through the Amazon Virtual Private Cloud (Amazon VPC) Dashboard? (Select TWO.)
A. Amazon CloudFront distributions **B.** Subnets **C.** Security Groups **D.** Elastic Load Balancing **E.** Amazon Route 53
Answer: B, C
Explanation: Explanation Amazon Virtual Private Cloud (Amazon VPC) lets you provision a logically isolated section of the AWS Cloud where you can launch AWS resources in a virtual network that you define. You have complete control over your virtual networking environment, including selection of your own IP address range, creation of subnets, and configuration of route tables and network gateways. You can use both IPv4 and IPv6 in your VPC for secure and easy access to resources and applications. You can easily customize the network configuration for your Amazon VPC. For example, you can create a public-facing subnet for your web servers that has access to the Internet, and place your backend systems such as databases or application servers in a private-facing subnet with no Internet access. You can leverage multiple layers of security, including security groups and network access control lists, to help control access to Amazon EC2 instances in each subnet.

NEW QUESTION: 4 Which type of dashboard does Cisco DNA Center provide for complete

control of the network?**A.** distributed management**B.** application management**C.** service management**D.** centralized management**Answer: D**Explanation: Cisco's DNA Center is the only centralized network management system to bring all of this functionality into a single pane of glass.
