**NEW QUESTION: 4** Your company has two offices. The offices are located in San Francisco and Los Angeles. Each office contains a data center. Each data center has a local connection to the Internet. You deploy an Exchange Server 2016 organization named Contoso and install three servers in each data center. All of the servers are members of a single database availability group (DAG). Each data center hosts 2,000 mailboxes that replicate to the other data center. You create four records in DNS. The records are configured as shown in the following table. You

need to recommend a client access solution for the organization to meet the following requirements: When connecting from the Internet, all users must connect to the same namespace for Outlook on the Web. If a connection to the Internet fails at one data center, all users must be able to access their mailbox from the Internet. When connecting from the Internet, all user connections to Exchange ActiveSync must be balanced equally across both data centers. What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer. **A.** Deploy a hardware-based load balancer to each office and configure all of the internal URLs to use mail.contoso.com. **B.** Deploy a hardware-based load balancer to each office and configure all of the external URLs to use mail.contoso.com. **C.** In the San Francisco office, configure the internal URLs of the servers to use the internal URL of mail.contoso.com.
