NEW QUESTION: 1An administrator is unknowingly trying to connect to a malicious website and download a known threat within a .rar file. All Symantec Endpoint Protection technologies are installed on the client's system. Drag and drop the technologies to the right side of the screen in the sequence necessary to block or detect the malicious file. **Answer:** Explanation:

NEW QUESTION: 2A. Option EB. Option BC. Option CD. Option DE. Option A **Answer: C,E**
Explanation: What is private IP address? A private IP address is the address space allocated by InterNIC to allow organizations to create their own private network. There are three IP blocks (1 class A, 1 class B and 1 class C) reserved for a private use. The computers, tablets and smartphones sitting behind your home, and the personal computers within an organizations are usually assigned private IP addresses. A network printer residing in your home is assigned a private address so that only your family can print to your local printer. When a computer is assigned a private IP address, the local devices sees this computer via it's private IP address. However, the devices residing outside of your local network cannot directly communicate via the private IP address, but uses your router's public IP address to communicate. To allow direct access to a local device which is assigned a private IP address, a Network Address Translator (NAT) should be used.

NEW QUESTION: 3Multiple VPLS services can be offered over the same set of LSP tunnels? **A. FALSE B. TRUE Answer: B**

NEW QUESTION: 4A network administrator is concerned about a particular server that is attacked occasionally from hosts on the Internet. The server is not critical; however, the attacks impact the rest of the network. While the company's current ISP is cost effective, the ISP is slow to respond to reported issues. The administrator needs to be able to mitigate the effects of an attack immediately without opening a trouble ticket with the ISP. The ISP is willing to accept a very small network route advertised with a particular BGP community string. Which of the following is the BESRT way for the administrator to mitigate the effects of these attacks? **A.** Work with the ISP and subscribe to an IPS filter that can recognize the attack patterns of the attacking hosts, and block those hosts at the local IPS device. **B.** Add a redundant connection to a second local ISP, so a redundant connection is available for use if the server is being attacked on one connection. **C.** Use the route protection offered by the ISP to accept only BGP routes from trusted hosts on the Internet, which will discard traffic from attacking hosts. **D.** Advertise a /32 route to the ISP to initiate a remotely triggered black hole, which will discard traffic destined to the problem server at the upstream provider. **Answer: D**
