We always aim at improving our users' experiences, 24/7 Customers support, Thus, Network-Security-Essentials actual test questions have a high hit rate.

NEW QUESTION: 1 HOT SPOT **Answer:** Explanation: Explanation Target 1: IActionFilter MVC3 introduced a completely new pattern to configure filters for controllers and its actions. While injection of filter attributes is still supported it is recommended using this new pattern for filter configuration because it has the advantage to support constructor injection and does not require the InjectAttribute anymore. First of all you have to create your filter class by implementing one of the filter interfaces e.g. IActionFilter. Target 2: public void OnActionExecuting(ActionExecutingContext filterContext) Target 3: public void OnActionExecuted(ActionExecutedContext filterContext) References:

NEW QUESTION: 2 SNS Publish リクエストの有効な引数は次のうちどれですか？
3つの答えを選んでください **A.** Language **B.** Topic **C.** Subject **D.** Destination **E.** Message **F.** Format **Answer:**

NEW QUESTION: 3 Sara, a security architect, has developed a framework in which several authentication servers work together to increase processing power for an application. Which of the following does this represent? **A.** Clustering **B.** Load balancing **C.** RAID **D.** Warm site **Answer: A**
Explanation: Anytime you connect multiple computers to work/act together as a single server, it is known as clustering. Clustered systems utilize parallel processing (improving performance and availability) and add redundancy. Server clustering is used to provide failover capabilities / redundancy in addition to scalability as demand increases. Incorrect Answers: A. A warm site is part of disaster recovery and involves the provision of some of the capabilities of a hot site, but it requires the customer to do more work to become operational. Warm sites provide computer systems and compatible media capabilities. B. Load balancing is a way of providing high availability by splitting the workload across multiple computers. D. RAID, or redundant array of independent disks (RAID). RAID allows your existing servers to have more than one hard drive so that if the main hard drive fails, the system keeps functioning.
