Now Our Exam Collection 156-836 will be a chance for you, You can pass your 156-836 updated study material at first attempt, Estruturit saves you absolutely from this embarrassment.

NEW QUESTION: 1CORRECT TEXTYou are using insmod. You do not want to use the default configuration file /etc/modules.conf. What environment variable should you modify:**Answer:** Explanation:MODULECONF

NEW QUESTION: 2仮想マシン構成の継続的な一貫性を管理するには、Azure Automation State Configurationを使用する必要があります。どの5つのアクションを順番に実行する必要がありますか？回答するには、適切なアクションをアクションのリストから回答領域に移動し、正しい順序に並べます。注：回答の選択肢の順序は複数あります。選択した正しい注文のクレジットを受け取ります。**Answer:** Explanation:ExplanationStep 1: Upload a configuration to Azure Automation State Configuration.Import the configuration into the Automation account.Step 2: Compile a configuration into a node configuration.A DSC configuration defining that state must be compiled into one or more node configurations (MOF document), and placed on the Automation DSC Pull Server.Step 3: Onboard the virtual machines to Azure Automation State Configuration.Onboard the Azure VM for management with Azure Automation State Configuration Step 4: Assign the node configuration Step 5: Check the compliance status of the node Each time Azure Automation State Configuration performs a consistency check on a managed node, the node sends a status report back to the pull server. You can view these reports on the page for that node.On the blade for an individual report, you can see the following status information for the corresponding consistency check:The report status - whether the node is "Compliant", the configuration "Failed", or the node is "Not Compliant" References: <https://docs.microsoft.com/en-us/azure/automation/automation-dsc-getting-started>

NEW QUESTION: 3Which three options are sources from which a SPAN session can copy traffic? (Choose three.)**A.** ports**B.** subnets**C.** secondary IP addresses**D.** primary IP addresses**E.** VLANs**F.** EtherChannels**Answer: A,E,F**Explanation:The interfaces from which traffic can be monitored are called SPAN sources. Sources designate the traffic to monitor and whether to copy ingress, egress, or both directions of traffic. SPAN sources include the following:Ethernet portsPort channelsThe inband interface to the control plane CPU - You can monitor the inband interface only from the default VDC. Inband traffic from all VDCs is monitored.VLANs - When a VLAN is specified as a SPAN source, all supported interfaces in the VLAN areSPAN sources.Remote SPAN (RSPAN) VLANsFabric port channels connected to the Cisco Nexus 2000 Series Fabric Extender Satellite ports and host interface port channels on the Cisco Nexus 2000 Series Fabric Extender-These interfaces are supported in Layer 2 access mode, Layer 2 trunk mode, and Layer 3 mode. Reference: http://www.cisco.com/c/en/us/td/docs/switches/datacenter/sw/5_x/nxos/system_manageme

NEW QUESTION: 4 You have an Azure IoT hub that uses a Device Provisioning Service instance. You create a new individual device enrollment that uses symmetric key attestation. Which detail from the enrollment is required to auto provision the device by using the Device Provisioning Service? **A.** the registration ID of the enrollment **B.** the device identity of the IoT hub **C.** the primary key of the enrollment **D.** the hostname of the IoT hub **Answer: B** Explanation: An enrollment is the record of devices or groups of devices that may register through auto-provisioning. The enrollment record contains information about the device or group of devices, including: the attestation mechanism used by the device the optional initial desired configuration desired IoT hub the desired device ID Note: Azure IoT auto-provisioning can be broken into three phases: 1. Service configuration - a one-time configuration of the Azure IoT Hub and IoT Hub Device Provisioning Service instances, establishing them and creating linkage between them. 2. Device enrollment - the process of making the Device Provisioning Service instance aware of the devices that will attempt to register in the future. Enrollment is accomplished by configuring device identity information in the provisioning service, as either an "individual enrollment" for a single device, or a "group enrollment" for multiple devices. 3. Device registration and configuration Reference: <https://docs.microsoft.com/en-us/azure/iot-dps/concepts-service#enrollment>
