SERVICE_NAMES初期化パラメータを変更してデータベースサービスを作成すると、OracleRestart構成に自動的に追加されます。 **D.** SQLを使用してインスタンスをHighで起動すると、*

Plusに依存するリスナーとASMディスクグループが自動的に起動します。 **Answer: B** Explanation: About Startup Dependencies Oracle Restart ensures that Oracle components are started in the proper order, in accordance with component dependencies. For example, if database files are stored in Oracle ASM disk groups, then before starting the database instance, Oracle Restart ensures that the Oracle ASM instance is started and the required disk groups are mounted. Likewise, if a component must be shut down, Oracle Restart ensures that dependent components are cleanly shut down first. Oracle Restart also manages the weak dependency between database instances and the Oracle Net listener (the listener): When a database instance is started, Oracle Restart attempts to start the listener. If the listener startup fails, then the database is still started. If the listener later fails, Oracle Restart does not shut down and restart any database instances.
