NEW QUESTION: 1You run Get-NetIPAddress and receive the output shown in the following exhibit:Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.NOTE: Each correct selection is worth one point.**Answer:** Explanation:

NEW QUESTION: 2Toby, the manager in charge of distribution for Nissa Designs, believes that a push strategy will increase efficiency for the company. Which of the following is a feature of a push strategy?**A.** It determines the amount of merchandise based on data gathered from POS terminals.**B.** It is essentially a customer-driven system.**C.** It involves shipment of the entire merchandise line based on current sales forecast.**D.** Merchandise is allocated to stores based on previous sales forecasts.**E.** It offers a lesser likelihood of overstocked goods.**Answer: D**

NEW QUESTION: 3A corporate network includes an Active Directory-integrated zone.All DNS servers that host the zone are domain controllers.You add multiple DNS records to the zone. You need to ensure that the new records are available on all DNS servers as soon as possible. Which tool should you use?**A.** Nslookup**B.** Active Directory Sites And Services console**C.** Dnslint **D.** Ntdsutil**Answer: B**Explanation:Reference:

<http://technet.microsoft.com/en-us/library/cc794809.aspx>Forcing ReplicationWhen you need updates to be replicated sooner than the intersite replication schedule allows, or when replication between sites is impossible because of configuration errors, you can force replication to and from domain controllers.Forcing replication of all directory updates over a connectionIf you want to replicate certain updates, such as a significant addition of new passwords or user accounts, to another domain controller in the domain, you can use the Replicate now option in the Active Directory Sites and Services snap-in to force replication of all directory partitions over a connection object that represents inbound replication from a specific domain controller. A connection object for a server object that represents a domain controller identifies the replication partner from which the domain controller receives replication. If the changes are made on one domain controller, you can select the connection from that domain controller and force replication to its replication partner.You can also use the Repadmin.exe command-line tool to replication changes from a server to one or more other servers or to all servers.
