Explanation: <https://support.citrix.com/article/CTX122916>

NEW QUESTION: 3 A company is running multiple applications on Amazon EC2. Each application is deployed and managed by multiple business units. All applications are deployed on a single AWS account but on different virtual private clouds (VPCs). The company uses a separate VPC in the same account for test and development purposes. Production applications suffered multiple outages when users accidentally terminated and modified resources that belonged to another business unit. A Solutions Architect has been asked to improve the availability of the company applications while allowing the Developers access to the resources they need. Which option meets the requirements with the LEAST disruption? **A.** Set up role-based access for each user and provide limited permissions based on individual roles and the services for which each user is responsible. **B.** Implement a tagging policy based on business units. Create an IAM policy so that each user can terminate instances belonging to their own business units only. **C.** Set up a federation to allow users to use their corporate credentials, and lock the users down to their own VPC. Use a network ACL to block each VPC from accessing other VPCs. **D.** Create an AWS account for each business unit. Move each business unit's instances to its own account and set up a federation to allow users to access their business unit's account. **Answer: B**
