### NEW QUESTION: 1

クラウドコンピューティングの多くの側面と機能により、eDiscoveryへのコンプライアンスが困難または高コストになる可能性があります。

クラウドコンピューティングのどの側面が最も複雑な要素になりますか？ **A.**

幅広いネットワークアクセス **B.** 移植性 **C.** 実測サービス **D.** マルチテナンシー **Answer: D**

Explanation: With multitenancy, multiple customers share the same physical hardware and systems. With the nature of a cloud environment and how it writes data across diverse systems that are shared by others, the process of eDiscovery becomes much more complicated. Administrators cannot pull physical drives or easily isolate which data to capture. They not only have to focus on which data they need to collect, while ensuring they find all of it, but they also have to make sure that other data is not accidentally collected and exposed along with it. Measured service is the aspect of a cloud where customers only pay for the services they are actually using, and for the duration of their use. Portability refers to the ease with which an application or service can be moved among different cloud providers. Broad network access refers to the nature of cloud services being accessed via the public Internet, either with or without secure tunneling technologies. None of these concepts would pertain to eDiscovery.

**NEW QUESTION: 2** A corporate environment includes an on-premise deployment of Exchange Server 2010 SP1 with standalone Edge Transport servers in a perimeter network. The company plans to move a subset of Exchange users to a cloud-based Exchange Server 2010 SP1 service. The security team has the following requirements: -Manage mailbox audit logging for the on-premise and cloud-based Exchange servers. -Search message tracking logs for all on-premise Exchange servers. -You need to recommend a solution that meets the requirements. What should you recommend? **A.** Use group policy to manage audit settings. Add the security team members to the Server Management management role group in both environments. **B.** Add the security team members to the Organization Management, Recipient Management, and Records Management management role groups in both environments. Add the security team members to the local Administrators group on each of the on-premise Exchange servers. **C.** Use group policy to manage audit settings. Add the security team members to the local Administrators group on each of the on-premise Exchange servers. **D.** Add the security team members to the Organization Management, Recipient Management, Records Management, and Server Management management role groups in both environments. **Answer: B** Explanation: Local Administrators The Exchange Auditing log contains a record of audited events and the Event Viewer has an ACL that prevents typical users from clearing the event log. If a local administrator took ownership of the appropriate registry key, reset the CustomSD value, and then restarted the server, the administrator could clear the Exchange Auditing log.
