**NEW QUESTION: 1** Which two options are accurate regarding the non-global zone console? **A.** Disconnect from the non-global zone console by using the ~. keys. **B.** Access the non-global zone console by using the zlogin -c command. **C.** Disconnect from the non-global zone console by using the #. keys. **D.** Access the non-global zone console by using the zlogin -1 command.  
**Answer: A, B**  
**Explanation:** A: How to Log In to the Zone Console Use the zlogin command with the -C option and the name of the zone, for example, my-zone.global# zlogin -C my-zone C: To disconnect from a non-global zone, use one of the following methods.\* To exit the zone non-virtual console:zonename# exit\* To disconnect from a zone virtual console, use the tilde (~) character and a period:zonename# ~.

**NEW QUESTION: 2** Which two statements about HSRP are true? (Choose two.) **A.** It supports tracking. **B.** Its multicast virtual MAC is 0000.5E00.01xx. **C.** It supports unique virtual MAC addresses. **D.** Its default configuration allows for pre-emption. **E.** Its virtual MAC is 0000.0C07.Acxx.  
**Answer: A, E**  
**Explanation:** Explanation: Default HSRP Configuration Feature  
Default Setting HSRP version Version 1 HSRP groups None configured Standby group number 0 Standby MAC address System assigned as: 0000.0c07.acXX, where XX is the HSRP group number Standby priority 100 Standby delay 0 (no delay) Standby track interface priority 10 Standby hello time 3 seconds Standby holdtime 10 seconds- The standby track interface configuration command ties the router hot standby priority to the availability of its interfaces and is useful for tracking interfaces that are not configured for HSRP. When a tracked interface fails, the hot standby priority on the device on which tracking has been configured decreases by 10. If an interface is not tracked, its state changes do not affect the hot standby priority of the configured device. For each interface configured for hot standby, you can configure a separate list of interfaces to be tracked.- The standby track interface-priority interface configuration command specifies how much to decrement the hot standby priority when a tracked interface goes down. When the interface comes back up, the priority is incremented by the same amount.
