**NEW QUESTION: 1**What level of logging is enabled on a Router where the following logs are seen?  
%LINK-3-UPDOWN: Interface FastEthernet0/1, changed state to up  
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/1, changed state to up  
**A. critical**  
**B. errors**  
**C. alerts**  
**D. notifications**  
**Answer: D**  
**Explanation:** Cisco routers, switches, PIX and ASA firewalls prioritize log messages into 8 levels (0-7), as shown below:  

Level	Description
0	Emergencies System is unusable
1	Alerts Immediate action needed
2	Critical Critical conditions
3	Errors Error conditions
4	Warnings Warning conditions
5	Notifications Informational messages
6	Informational Normal but significant conditions
7	Debugging Debugging messages

  
When you enable logging for a specific level, all logs of that severity and greater (numerically less) will be logged. In this case we can see that logging level of 3 (as seen by the 3 in " LINK-3-UPDOWN") and level 5 (as seen by the 5 in " LINEPROTO-5-UPDOWN" ) are shown, which means that logging level 5 must have been configured. As shown by the table, logging level 5 is Notifications.
