NEW QUESTION: 1 A security analyst has discovered that an outbound SFTP process is occurring at the same time of day for the past several days. At the time this was discovered, large amounts of business critical data were delivered. The authentication for this process occurred using a service account with proper credentials. The security analyst investigated the destination IP for this transfer and discovered that this new process is not documented in the change management log. Which of the following would be the BEST course of action for the analyst to take?
A. Verify SLA with cloud provider.
B. Run a vulnerability scan.
C. Investigate a potential incident.
D. Verify user permissions.
Answer: C

NEW QUESTION: 2 Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. A company has a Microsoft SQL Server environment in Microsoft Azure. The databases are stored directly in Azure blob storage. You need to ensure that you can restore a database to a specific point in time between backups while minimizing the number of Azure storage containers required. Which option should you use?
