NEW QUESTION: 1会社がMicrosoft Intuneを展開する予定です。

Intuneで管理できるアプリの種類は？

以下の各ステートメントについて、ステートメントが真である場合は「はい」を選択します。それ以外の場合は、「いいえ」を選択します。

注：それぞれの正しい選択には1ポイントの価値があります。**Answer:** Explanation:

NEW QUESTION: 2When creating a flexible volume, which attribute determines the volume's position in the namespace?**A.** Export policy**B.** Junction path**C.** Aggregate**D.** SVM**Answer: D**
Explanation:Volumes are associated with one Storage Virtual Machine (SVM).The SVM is a virtual management entity, or server, that consolidates various cluster resources into a single manageable unit. When you create a volume, you specify the SVM it is associated with. The type of the volume (FlexVol volume or Infinite Volume) is determined by an immutable SVM attribute. Volumes have a language. The language of the volume determines the character set Data ONTAP uses to display file names and data for that volume. The default value for the language of the volume is the language of the SVM.Volumes depend on their associated aggregates for their physical storage; they are not directly associated with any concrete storage objects, such as disks or RAID groups. If the cluster administrator has assigned specific aggregates to an SVM, then only those aggregates can be used to provide storage to the volumes associated with that SVM. This impacts volume creation, and also copying and moving FlexVol volumes between aggregates.

NEW QUESTION: 3**A.** Option A**B.** Option B**C.** Option C**D.** Option D**Answer: C**
Explanation:Here we see that Rtr3 is configured to use PPP encapsulation, but Rtr1 has not been configured for any kind of encapsulation. The default on Cisco router serial interfaces is HDLC, not PPP, so there is an encapsulation mismatch.

NEW QUESTION: 4**DRAG DROP**You plan to deploy an application by using three Azure virtual machines (VMs). The application has a web-based component that uses TCP port 443 and a custom component that uses UDP port 2020.The application must be available during planned and unplanned Azure maintenance events. Incoming client requests must be distributed across the three VMs. Clients must be connected to a VM only if both application components are

running. You need to configure the VM environment. For each requirement, what should you implement? To answer, drag the appropriate configuration type to the correct target. Each configuration type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Select and Place: **Answer:** Explanation: Explanation/Reference: Box 1: availability set. Box 2: backend pool. Box 3: health probe.
