NEW QUESTION: 2A. Use the Assembly Registration tool (regasm.exe) to register the assembly and to copy the assembly to the GAC.
B. Use Microsoft Register Server (regsvr32.exe) to add the assembly to the GAC.
C. Use Windows Installer 2.0 to add the assembly to the GAC.
D. Use the Strong Name tool (sn.exe) to copy the assembly into the GAC.
E. Use the Global Assembly Cache tool (gacutil.exe) to add the assembly to the GAC.
Answer: C, E
Explanation: There are two ways to deploy an assembly into the global assembly cache: Use an installer designed to work with the global assembly cache. This is the preferred option for installing assemblies into the global assembly cache. Use a developer tool called the Global Assembly Cache tool (Gacutil.exe), provided by the Windows Software Development Kit (SDK). Note: In deployment scenarios, use Windows Installer 2.0 to install assemblies into the global assembly cache. Use the Global Assembly Cache tool only in development scenarios, because it does not provide assembly reference counting and other features provided when using the Windows Installer.
