NEW QUESTION: 1Hotspot QuestionA company is developing a software as a service (SaaS) solution in Azure for other business to manage customers. The solution includes the following Azure SQL Database instances.Customer data exists in all databases.Customers may request that the company remove data that relates to the customer. If a customer makes a deletion request, all details from the customer must be removed from the solution. All deletions for a customer must occur in one distributed transaction that includes the CRM, ERP, and Marketing databases.You need to activate support for transactions over multiple databases on the same logical server and activate support for transactions over multiple servers.Which actions and Azure PowerShell command should you use? To answer, select the appropriate options in the answer area.**NOTE:** Each correct selection is worth one point.**Answer:** Explanation:Explanation: Box 1: Use a transaction scopeThe TransactionScope class establishes an ambient transaction in .NET. (An "ambient transaction" is one that lives in the current thread.) All connections opened within the TransactionScope participate in the transaction. If different databases participate, the transaction is automatically elevated to a distributed transaction.Box 2: New-AzureRmSqlServerCommunicationLinkNew-AzureRmSqlServerCommunicationLink: Use this cmdlet to create a new communication relationship between two logical servers in Azure SQL DB. The relationship is symmetric which means both servers can initiate transactions with the other server.References: <https://docs.microsoft.com/en-us/azure/sql-database/sql-database-elastic-transactions-overview>
