**NEW QUESTION: 2**An organization has various integrations implemented as Mule applications. Some of these Mule applications are deployed to customhosted Mule runtimes (on-premises) while others execute in theMuleSoft-hosted runtime plane (CloudHub). To perform the Integra functionality, these Mule applications connect to various backend systems, with multiple applications typically needing to access the backend systems.How can the organization most effectively avoid creating duplicates in each Mule application of the credentials required to access thebackend systems?**A.** Segregate the credentials for each backend system into environment-specific properties files Package these properties files in each Mule application, from where they are loaded at startup**B.** Create a Mule domain project that maintains the credentials as Mule domain-shared resources Deploy the Mule applications to the Mule domain, so the credentials are available to the Mule applications**C.** Configure or create a credentials service that returns the credentials for each backend system, and that is accessible from customer-hosted and MuleSoft-hosted Mule runtimes Have the Mule applications toad the properties at startup by invoking that credentials service**D.** Store the credentials in properties files in a shared folder within the organization's data center Have the Mule applications load properties files from this shared location at startup**Answer: C**

**NEW QUESTION: 3****A.** Option **A****B.** Option **C****C.** Option **C****D.** Option **B****E.** Option **E****Answer: C**
