NEW QUESTION: 1 Which of the following storage types utilizes Universal Naming Convention (UNC) addressable storage? **A. SAS B. DASC. NAS D. SAN** **Answer: C**

NEW QUESTION: 2 When implementing IP SLA icmp-echo probes on Cisco IOS-XE routers, which two options are available for IPv6? (Choose two.) **A. flow-label B. traffic-class C. DSCP D. hop-limit E. TOS** **Answer: A, B** **Explanation:** Explanation/Reference:

NEW QUESTION: 3 Which two protocols are supported by the Insert from IJRL script step in FileMaker 13? (Choose two) **A. HTTPS B. FTP C. WSDL D. SMTP E. XML** **Answer: A, B**

NEW QUESTION: 4 A security engineer is working on a large software development project. As part of the design of the project, various stakeholder requirements were gathered and decomposed to an implementable and testable level. Various security requirements were also documented. Organize the following security requirements into the correct hierarchy required for an SRTM. Requirement 1: The system shall provide confidentiality for data in transit and data at rest. Requirement 2: The system shall use SSL, SSH, or SCP for all data transport. Requirement 3: The system shall implement a file-level encryption scheme. Requirement 4: The system shall provide integrity for all data at rest. Requirement 5: The system shall perform CRC checks on all files. **A. Level 1: Requirements 1 and 4; Level 2: Requirements 2, 3, and 5 B. Level 1: Requirements 1 and 4; Level 2: Requirement 2 under 1, Requirement 5 under 4; Level 3: Requirement 3 under 2 C. Level 1: Requirements 1 and 4; Level 2: Requirements 2 and 3 under 1, Requirement 5 under 4 D. Level 1: Requirements 1, 2, and 3; Level 2: Requirements 4 and 5** **Answer: C** **Explanation:** Confidentiality and integrity are two of the key facets of data security. Confidentiality ensures that sensitive information is not disclosed to unauthorized users; while integrity ensures that data is not altered by unauthorized users. These are Level 1 requirements. Confidentiality is enforced through encryption of data at rest, encryption of data in transit, and access control. Encryption of data in transit is accomplished by using secure

protocols such as PSec, SSL, PPTP, SSH, and SCP, etc. Integrity can be enforced through hashing, digital signatures and CRC checks on the files. In the SRTM hierarchy, the enforcement methods would fall under the Level requirement.
