VPCでは各EC2インスタンスのMACアドレスを設定できるため、組織はVPCを使用する必要があります。 **D.**

組織はプライベートサブネットにVPCを使用し、そのサブネットにMACアドレスを構成する必要があります。 **Answer: A** Explanation: A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. It enables the user to launch AWS resources into a virtual network that the user has defined. An Elastic Network Interface (ENI) is a virtual network interface that the

user can attach to an instance in a VPC. An ENI can include attributes such as: a primary private IP address, one or more secondary private IP addresses, one elastic IP address per private IP address, one public IP address, one or more security groups, a MAC address, a source/destination check flag, and a description. The user can create a network interface, attach it to an instance, detach it from an instance, and attach it to another instance. The attributes of a network interface follow the network interface as it is attached or detached from an instance and reattached to another instance. Thus, the user can maintain a fixed MAC using the network interface.<http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/using-eni.html>
