**NEW QUESTION: 1A. Option CB. Option BC. Option ED. Option DE. Option AAnswer: C**

Explanation:Explanation@Tullipp on securitytut.com commented:"the IPSEC Mode question did come up. It has been been very badly worded in the dumps and I knew It cantbe right.The question that comes in the exam is "between client and server vpn endpoints".So the keyword here is vpn endpoints. Not the end points like its worded in the dumps.So the answer is transport mode."+ IPSec Transport mode is used for end-to-end communications, for example, for communication between aclient and a server or between a workstation and a gateway (if the gateway is being treated as a host). A goodexample would be an encrypted Telnet or Remote Desktop session from a workstation to a server.+ IPsec supports two encryption modes: Transport mode and Tunnel mode. Transport mode encrypts only thedata portion (payload) of each packet and leaves the packet header untouched. Transport mode is applicable toeither gateway or host implementations, and provides protection for upper layer protocols as well as selectedIP header fields.Source:

If network layer protocols other than IP are to besupported, an IP encapsulation method must be chosen so that those protocols can be transported in IP packets.+ IPmc is not supported with IPsec Direct Encapsulation. IPsec was created to be a security protocol between two and only two devices, so a service such as multicast is problematic. An IPsec peer encrypts a packet sothat only one other IPsec peer can successfully perform the de-encryption. IPmc is not compatible with thismode of operation.Source:
