We maintain Question Bank of valid **FCSS_ADA_AR-6.7 Reliable Study Guide** Questions that is kept up-to-date by checking update on daily basis.

NEW QUESTION: 1A large multinational company runs a timesheet application on AWS that is used by staff across the world. The application runs on Amazon EC2 instances in an Auto Scaling group behind an Elastic Load Balancing (ELB) load balancer, and stores in an Amazon RDS MySQL Multi-AZ database instance. The CFO is concerned about the impact on the business if the application is not available. The application must not be down for more than two hours, but the solution must be as cost-effective as possible. How should the Solutions Architect meet the CFO's requirements while minimizing data loss?**A.** Configure a 1-day window of 60-minute snapshots of the Amazon RDS Multi-AZ database instance which is copied to another region. Create an AWS CloudFormation template of the application infrastructure that uses the latest copied snapshot. When an issue occurs, use the AWS CloudFormation template to create the environment in another region. Update the DNS record to point to the other region's ELB.**B.** Configure a read replica in another region. Create an AWS CloudFormation template of the application infrastructure. When an issue occurs, promote the read replica and configure as an Amazon RDS Multi-AZ database instance and use the AWS CloudFormation template to create the environment in another region using the promoted Amazon RDS instance. Update the DNS record to point to the other region's ELB.**C.** In another region, configure a read replica and create a copy of the infrastructure. When an issue occurs, promote the read replica and configure as an Amazon RDS Multi-AZ database instance. Update the DNS to point to the other region's ELB.**D.** Configure a 1-day window of 60-minute snapshots of the Amazon RDS Multi-AZ database instance. Create an AWS CloudFormation template of the application infrastructure that uses the latest snapshot. When an issue occurs, use the AWS CloudFormation template to create the environment in another region. Update the DNS record to point to the other region's ELB.**Answer: A**

NEW QUESTION: 2A. Option AB. Option BC. Option DD. Option C**Answer: B**

NEW QUESTION: 3Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You need to run a Transact-SQL script against a Microsoft Azure SQL database daily at 01:00.Solution: You deploy Microsoft SQL Server to an Azure virtual machine, and then you use the SQL Server Agent to schedule a job.Does this meet the goal?**A. No****B. Yes****Answer: B**

NEW QUESTION: 4Your company identifies the following business continuity and disaster recovery objectives for virtual machines that host sales, finance, and reporting application in the company's on-premises data center.*The finance application requires that data be retained for seven years. In the event of a disaster, the application must be able to run from Azure. The recovery in objective (RTO) is 10 minutes,* The reporting application must be able to recover point in-time data at a daily granularity. The RTO is eight hours.*The sales application must be able to fail over to second on-premises data center.You need to recommend which Azure services meet the business community and disaster recovery objectives.The solution must minimize costs.What should you recommend for each application? To answer, drag the appropriate services to the correct application. Each service may be used owe. More than once not at an You may need to drag the spin bar between panes or scroll 10 view content.**Answer:**
Explanation:Explanation
