NEW QUESTION: 1You need to verify that an XMLHttpRequest has completed in JavaScript. What should you do?**A.** Create an event handler for the onreadystatechange event**B.** check textStatus for a timeout**C.** explicitly set Request header to accept JSON**D.** explicitly set the Request header to a different HTTP action**Answer: A**

NEW QUESTION: 2Which of the following Registration Tasks sets up the business or operational functional description and system identification**A.** Registration Task 3**B.** Registration Task 4**C.** Registration Task 2**D.** Registration Task 1**Answer: D**

NEW QUESTION: 3View the GlobalProtect configuration screen capture.What is the purpose of this configuration?**A.** It forces the firewall to perform a dynamic DNS update, which adds the internal gateway's hostname and IP address to the DNS server.**B.** It configures the tunnel address of all internal clients to an IP address range starting at 192.168.10.1.**C.** It forces an internal client to connect to an internal gateway at IP address 192.168.10.1.**D.** It enables a client to perform a reverse DNS lookup on 192.168.10.1 to detect that it is an internal client.**Answer: D**

DExplanation:Reference:

<https://www.paloaltonetworks.com/documentation/80/globalprotect/globalprotect-admin-guide/globalprotect-portals/define-the-globalprotect-client-authentication-configurations/define-the-globalprotect-agent-configurations>"Select this option to allow the GlobalProtect agent to determine if it is inside the enterprise network. This option applies only to endpoints that are configured to communicate with internal gateways. When the user attempts to log in, the agent does a reverse DNS lookup of an internal host using the specified Hostname to the specified IP Address. The host serves as a reference point that is reachable if the endpoint is inside the enterprise network. If the agent finds the host, the endpoint is inside the network and the agent connects to an internal gateway; if the agent fails to find the internal host, the endpoint is outside the network and the agent establishes a tunnel to one of the external gateways"
