NEW QUESTION: 2In welchen der folgenden Felder können Sie beim Erstellen mehrerer ähnlicher Anlagenstammsätze separate Einträge für jede einzelne Anlage vornehmen? Wähle die richtigen Antworten. (3)**A.** Kostenstelle**B.** Inventarnummer**C.** Beschreibung des Assets**D.** Kennzeichen

Answer: A,B,C

NEW QUESTION: 3Which two statements are true about a unified ISSU? (Choose two.)**A.** It is only supported on platforms with redundant power supplies.**B.** It requires that Bidirectional Forwarding Detection be disabled.**C.** It requires that graceful Routing Engine switchover be enabled.**D.** It is only supported on platforms with redundant control planes.**Answer: C,D**

Explanation:**B:** Recent development work by many router vendors has focused on an effort to provide hitless control plane switchovers, which means keeping the control plane states in sync between the active and standby control planes prior to a switchover. Many consider this capability to be a prerequisite to delivering ISSU. Hitless control plane switch overs are usually implemented using the same version of code on both active and standby control plane components. However, ISSU design additionally requires different software versions running on active and standby control plane components.**D:** Unified ISSU is supported only on dual Routing Engine platforms. In addition, the graceful Routing Engine switchover (GRES) and nonstop active routing (NSR) must be enabled.

NEW QUESTION: 4 Refer to the exhibit. A spoke site that is connected to Router-A cannot reach a spoke site that is connected to Router-B, but both spoke sites can reach the hub. What is the likely cause of this issue?
A. There is a routing issue, as NHRP registration is working.
B. There is a router doing PAT at site B.
C. NHRP is learning the IP address of the remote spoke site as a /32 address rather than a /24 address.
D. There is a router doing PAT at site A.
Answer: D

Explanation: If one spoke is behind one NAT device and another different spoke is behind another NAT device, and Peer Address Translation (PAT) is the type of NAT used on both NAT devices, then a session initiated between the two spokes cannot be established.
