(Choose two.)**A.** may be used to define the storage and networking characteristics of multiple servers**B.** may contain VMware vSphere virtual machine definition**C.** may contain UUID, MAC address for each virtual NIC, and WWN specifications for each HBAD**D.** may contain firmware version information

E. may contain server operating system
Answer: C, D
Explanation: Explanation/Reference:
Explanation: A service profile includes four types of information:
* Server definition: Defines the resources (e.g. a specific server or a blade inserted to a specific chassis) that are required to apply to the profile.
* Identity information: Includes the UUID, MAC address for each virtual NIC (vNIC), and WWN specifications for each HBA.
* Firmware revision specifications: Used when a certain tested firmware revision is required to be installed or for some other reason a specific firmware is used.
* Connectivity definition: Configures network adapters, fabric extenders, and parent interconnects, however this information is abstract as it does not include the details of how each network component is configured.

NEW QUESTION: 4 At what stage of the applications development process would encryption key management initially be addressed?
A. Systems testing
B. Deployment
C. Code reviews
D. Requirements development
Answer: D
Explanation: Encryption key management has to be integrated into the requirements of the application's design. During systems testing and deployment would be too late since the requirements have already been agreed upon. Code reviews are part of the final quality assurance (QA) process and would also be too late in the process.
