High-quality NSE6_FML-6.4 Exam Consultant - Pass NSE6_FML-6.4 Once - Complete NSE6_FML-6.4 Reasonable Exam Price

A part of candidates say that our NSE6_FML-6.4 exam collection has nearly 90% similarity with the real test questions, According to some research, useless practice materials can make the preparation of NSE6_FML-6.4 practice exam become stale.

Welcome your coming to experience free demos, Firstly, NSE6_FML-6.4 trustworthy practice online training can simulate the actual test environment and bring you to the mirror scene, which let you have a good knowledge of the NSE6_FML-6.4 actual test situation.

Our NSE6_FML-6.4 exam questions have been designed by the experts after an in-depth analysis of the exam and the study interest and hobbies of the candidates, For this, you don't have to worry as Estruturit is here to help you in preparation for NSE6_FML-6.4 questions.

The contents of our study materials are the most suitable for busy people, We offer Free Fortinet NSE6_FML-6.4 PDF Demo, We assure you 100% pass exam, Estruturit covers all the pertinent areas and necessary guidelines to enable you to clear the NSE6_FML-6.4 exam with minimum hassle.

NEW QUESTION: 1Your company has one main office and 10 branch offices.You plan to deploy Active Directory.You need to recommend a solution to recover Active Directory domain objects in the event of data loss. The solution must ensure that you can recover individually deleted user accounts.What should you recommend?**A.** Schedule regular backups of the SYSVOL folder on the existing domain controller.**B.** Schedule regular system state backups by using Windows Server Backup.**C.** Install a server that runs Windows Server 2008 that has Active Directory Lightweight Directory Services (AD LDS).**D.** Install multiple domain controllers.**Answer: B**
Explanation:Explanation/Reference:To make sure that the Active Directory domain objects can be recovered in the event of data loss and to recover individually deleted user accounts, you need to use Windows Server Backup to schedule regular system state backups.The Windows Server Backup feature in Windows Server 2008 consists of an MMC snap-in and command-line tools that provide a complete solution for your day-to-day backup and recovery needs. You can use four wizards to guide you through running backups and recoveries. You can use Windows Server Backup to back up a full server (all volumes), selected volumes, or the system state. You can recover volumes, folders, files, certain applications, and the system state. And, in case of disasters like hard disk failures, you can perform a system recovery by using a full server backup and the Windows Recovery Environment-this will restore your complete system onto the new hard disk.You need not backup SYSVOL folder because it can include updates to passwords for user accounts, computer accounts, and trusts. It can also include updates to group membership, policies, and the replication topology and its schedules.Reference: Backup and Recovery Overview / What is Windows Server Backup?

NEW QUESTION: 2You are migrating an existing solution to Azure.The solution includes a user interface tier and a database tier. The user interface tier runs on multiple virtual machines (VMs). The user interface tier has a website that uses Node.js. The user interface tier has a background process that uses Python. This background process runs as a scheduled job.The user interface tier is updated frequently. The database tier uses a self-hosted MySQL database. The user interface tier requires up to 25 CPU cores.You must be able to revert the user interface tier to a previous version if updates to the website cause technical problems. The database requires up to 50 GB of memory. The database must run in a single VM.You need to deploy the solution to Azure. What should you do first?**A.** Deploy the entire solution to an Azure website. Use a web job that runs continuously to host the database.**B.** Deploy the database to a VM that runs Windows Server on the Standard tier.**C.** Deploy the entire solution to an Azure website. Run the database by using the Azure data management services.**D.** Deploy the user interface

tier to a VM. Use multiple availability sets to continuously deploy updates from Microsoft Visual Studio Online.**Answer: C**Explanation:Explanation:
