It will be your best auxiliary tool on your path of review preparation.

NEW QUESTION: 1 True or False: Arista MLAG requires a second Peer-Keepalive link to be cabled between the switches in the MLAG domain. **A. FALSE B. TRUE Answer: A**

NEW QUESTION: 2 **Answer:** Explanation: Explanation Is Read Committed Snapshot On: True Snapshot isolation enhances concurrency for OLTP applications. Understanding Snapshot Isolation and Row Versioning Once snapshot isolation is enabled, updated row versions for each transaction are maintained in tempdb. A unique transaction sequence number identifies each transaction, and these unique numbers are recorded for each row version. The transaction works with the most recent row versions having a sequence number before the sequence number of the transaction. Newer row versions created after the transaction has begun are ignored by the transaction. The term "snapshot" reflects the fact that all queries in the transaction see the same version, or snapshot, of the database, based on the state of the database at the moment in time when the transaction begins. No locks are acquired on the underlying data rows or data pages in a snapshot transaction, which permits other transactions to execute without being blocked by a prior uncompleted transaction. Transactions that modify data do not block transactions that read data, and transactions that read data do not block transactions that write data, as they normally would under the default READ COMMITTED isolation level in SQL Server. This non-blocking behavior also significantly reduces the likelihood of deadlocks for complex transactions. References: <https://docs.microsoft.com/en-us/dotnet/framework/data/adonet/sql/snapshot-isolation-in-sql-server>

NEW QUESTION: 3 A manager asks a network engineer to advise which cloud service models are used so employees do not have to waste their time installing, managing, and updating software which is only used occasionally Which cloud service model does the engineer recommend? **A. infrastructure-as-a-service B. software-as-a-service C. business process as service to support different types of service D. platform-as-a-service Answer: B**
