Box 1: Yes The ItemDescription field in not searchable. Box 2: No The ItemDescription field in not searchable, but we would need to recreate the index. Box 3: Yes An indexer in Azure Search is a crawler that extracts searchable data and metadata from an external Azure data source and populates an index based on field-to-field mappings between the index and your data source. This approach is sometimes referred to as a 'pull model' because the service pulls data in without you having to write any code that adds data to an index. Box 4: No References:
