NEW QUESTION: 1In the Cisco ACI fabric, which address is IP ARP packet forwarding based on?
A. Multicast group VTEP**B.** Spine proxy VTEP**C.** Border leaf VTEP**D.** Leaf vPC VTEP**E.** Destination address contained within the ARP packet**F.** Leaf VTEP**Answer: F**

NEW QUESTION: 2Which option describes how a router responds if LSA throttling is configured and it receives the identical LSA before the interval is set?
A. The LSA is ignored and a notification is sent to the sending router to slow down its LSA packet updates.**B.** The LSA is added to the OSPF database and a notification is sent to the sending router to slow down its LSA packet updates.**C.** The LSA is ignored.**D.** The LSA is added to the OSPF database.**Answer: C**
Explanation:How OSPF LSA Throttling Works The timers throttle lsa all command controls the generation (sending) of LSAs. The first LSA is always generated immediately upon an OSPF topology change, and the next LSA generated is controlled by the minimum start interval. The subsequent LSAs generated for the same LSA are rate-limited until the maximum interval is reached. The "same LSA" is defined as an LSA instance that contains the same LSA ID number, LSA type, and advertising router ID. The timers lsa arrival command controls the minimum interval for accepting the same LSA. If an instance of the same LSA arrives sooner than the interval that is set, the LSA is dropped. It is recommended that the arrival interval be less than or equal to the hold-time interval of the timers throttle lsa all command.Reference.
