NEW QUESTION: 1 What port scanning method is the most reliable but also the most detectable?
A. Half Scanning **B.** Verbose Scanning **C.** Idlescan Scanning **D.** ICMP Scanning **E.** Null Scanning **F.** Connect Scanning
Answer: F
Explanation: A TCP Connect scan, named after the Unix connect() system call is the most accurate scanning method. If a port is open the operating system completes the TCP three-way handshake, and the port scanner immediately closes the connection.

NEW QUESTION: 2 Which statement about the RPF interface in a BIDIR-PIM network is true?
A. There is no RPF interface concept in BIDIR-PIM networks. **B.** In a BIDIR-PIM network, the RPF interface is always the interface that is used to reach the PIM rendezvous point. **C.** In a BIDIR-PIM network, the RPF interface is always the interface that is used to reach the source. **D.** In a BIDIR-PIM network, the RPF interface can be the interface that is used to reach the PIM rendezvous point or the interface that is used to reach the source.
Answer: B
Explanation/Reference: RPF stands for "Reverse Path Forwarding". The RPF Interface of a router with respect to an address is the interface that the MRIB indicates should be used to reach that address. In the case of a BIDIR-PIM multicast group, the RPF interface is determined by looking up the Rendezvous Point Address in the MRIB. The RPF information determines the interface of the router that would be used to send packets towards the Rendezvous Point Link for the group.
