**NEW QUESTION: 1A. Option DB. Option CC. Option BD. Option AAnswer: B,D**Explanation: There are no domain/forest/schema requirements, but clients must be running Windows 8/Windows Server 2012 or later. Offline Files have four modes of operation: Online Slow link Auto offline Manual offline Offline Files transition between the three modes online, slow link and auto offline depending on connection speed. The user can always override the automatic mode selection by manually switching to manual offline mode. To determine the connection speed two pings with default packet size are sent to the file server. If the average round-trip time is below 80 ms (Windows 7) or 35 ms (Windows 8), the connection is put into online mode, otherwise into slow link mode. The latency value of 35/80 ms is configurable through the Group Policy setting Configure slow-link mode. Reads, Writes and Synchronization In online mode, changes to files are made on the file server as well as in the local cache (this induces a performance hit - see this article for details). Reads are satisfied from the local cache (if in sync). In slow link mode, changes to files are made in the local cache. The local cache is background-synchronized with the file server every 6 hours (Windows 7) or 2 hours (Windows 8), by default. This can be changed through the Group Policy setting Configure Background Sync. . In auto offline mode, all reads and writes go to the local cache. No synchronization occurs. . In manual offline mode, all reads and writes go to the local cache. No synchronization occurs by default, but background synchronization can be enabled through the Group Policy setting Configure Background Sync.

**NEW QUESTION: 2**診断ツールの2つの機能とは何ですか？**A.** ネットワークデバイスコマンドの実行**B.** TCPダンプ**C.** 有効**D.** ネットワークがダウンしています  
**Answer: A,B**

**NEW QUESTION: 3**When should a post-mortem review meeting be held after an intrusion has been properly taken care of?**A.** Within the first three months after the investigation of the intrusion is completed.**B.** Within the first month after the investigation of the intrusion is completed.**C.** Within the first week after prosecution of intruders have taken place, whether successful or not.**D.** Within the first week of completing the investigation of the intrusion.  
**Answer: D**Explanation:Explanation/Reference:A post-mortem review meeting should be held with all involved parties within three to five working days of completing the investigation of the intrusion. Otherwise, participants are likely to forget critical information.Even if it enabled an organization to validate the correctness of its chain of custody of evidence, it would not make sense to wait until prosecution is complete because it would take too much time and many cases of intrusion never get to court anyway.Source: ALLEN, Julia H., The CERT Guide to System and Network Security Practices, Addison-Wesley,2001, Chapter 7: Responding to Intrusions (page 297).
