It can simulate the real exam's scenarios, set timed [Valid E\\_S4CPE\\_2405 Mock Test](#) score, score your performance, point out mistakes and remind you of practicing many times.

**NEW QUESTION: 1** IAM 역할에 연결하는 두 가지 정책은 액세스 정책과 신뢰 정책입니다. 신뢰 정책은 \_\_\_\_\_ 작업을 추가하여 역할을 맡을 수 있는 사람을 식별하고 AWS Lambda 계정 사용자의 권한을 부여합니다. **A.** lambda:InvokeAsync **B.** sts:InvokeAsync **C.** sts:AssumeRole **D.** aws:AssumeAdmin

**Answer: C** Explanation: The two policies that you attach to an IAM role are the access policy and the trust policy. Remember that adding an account to the trust policy of a role is only half of establishing the trust relationship. By default, no users in the trusted accounts can assume the role until the administrator for that account grants the users the permission to assume the role by adding the Amazon Resource Name (ARN) of the role to an Allow element for the sts:AssumeRole action.

[http://docs.aws.amazon.com/IAM/latest/UserGuide/id\\_roles\\_manage\\_modify.html](http://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_manage_modify.html)

**NEW QUESTION: 2** You have configured persistent NAT in your NAT rule base. You create a security policy in the direction of external to internal. Which persistent NAT parameter should you configure? **A.** target-host **B.** all-remote-host **C.** target-host-port **D.** any-remote-host **Answer: A, D** Explanation: The following types of persistent NAT can be configured on the Juniper Networks device: \* Any remote host-All requests from a specific internal IP address and port are mapped to the same reflexive transport address. Any external host can send a packet to the internal host by sending the packet to the reflexive transport address. \* Target host-All requests from a specific internal IP address and port are mapped to the same reflexive transport

address. An external host can send a packet to an internal host by sending the packet to the reflexive transport address. The internal host must have previously sent a packet to the external host's IP address. Reference:

**NEW QUESTION: 3** Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The design has a primary zone and three satellite zones. Each satellite zone has a number of Virtual Delivery Agent (VDA) machines that belong to a single Delivery Group spanning across all three satellite zones. Click the Exhibit button for more details about the configuration. How should the architect ensure that the SharePoint application has optimal performance for all the user groups? **A.** Publish SharePoint in an individual Delivery Group within each zone. **B.** Edit the zone properties to only allow SharePoint to launch in Zone-SFO. **C.** Use PowerShell to change the process priority to "high" for SharePoint within Zone-SFO. **D.** Edit the application properties to set Zone-SFO as the home zone for SharePoint. **Answer: C**
