NEW QUESTION: 3Which description of an advantage of utilizing IPS virtual sensors is true?**A.** The persistent store is unlimited for the IPS virtual sensor.**B.** Asymmetric traffic can be split between multiple virtual sensors**C.** The virtual sensor does not require 802.1q headers for inbound traffic.**Answer: A****Explanation:**
http://www.cisco.com/c/en/us/td/docs/security/ips/7-0/configuration/guide/cli/cliguide7/cli_virtual_sensors.pdf

NEW QUESTION: 4You have multiple VPN connections and want to provide secure communication between sites using theAWS VPN CloudHub. Which statement is the most accurate in describing what you must do to set this up correctly?**A.** Create a virtual private gateway with multiple customer gateways, each with a unique set of keys**B.** Create a virtual public gateway with multiple customer gateways, each with a unique Private subnet**C.** Create a virtual private gateway with multiple customer gateways, each with unique subnet id**D.** Create a virtual private gateway with multiple customer gateways, each with unique Border Gateway Protocol (BGP) Autonomous System Numbers (ASNs)**Answer: D****Explanation:**If you have multiple VPN connections, you can provide secure communication between sites using theAWS VPN CloudHub. The VPN CloudHub operates on a simple hub-and-spoke model that you can use with or without a VPC. This design is suitable for customers with multiple branch offices and existingInternet connections who'd like to implement a convenient, potentially low-cost hub-and-spoke model for primary or backup connectivity between these remote offices.To use the AWS VPN CloudHub, you must create a virtual private gateway with multiple customer gateways, each with unique Border Gateway Protocol (BGP) Autonomous System Numbers (ASNs).Customer gateways advertise the appropriate routes (BGP prefixes) over their VPN connections. These routing advertisements are received and re-advertised to each BGP peer, enabling each site to send data to and receive data from the other sites. The routes for each spoke must have unique ASNs and the sites must not have overlapping IP ranges. Each site can also send and receive data from the VPC as if they were using a standard VPN connection.
