If you have a good comments or suggestions [SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Asset Management](#) during the trial period, you can also give us feedback in a timely manner.

NEW QUESTION: 1Which two attributes can you use to group shipment lines into a single shipment? (Choose two.)**A. FOBB. CarrierC. Ship-to locationD. Sales OrderE. Item****Answer: A,C**
Explanation:ExplanationA shipment comprises a set of shipment lines, grouped by certain common shipping attributes, that are scheduled to be shipped to a customer's ship-to location on a specific date and time. You can include items from different sales orders in a shipment. You can either manually or automatically group shipment lines to create a shipment. The shipment lines are grouped by the mandatory default criteria: ship-from location and ship-to location. However, you may also include additional grouping criteria, such as customer, freight terms, FOB (Free on board), and shipping method.

NEW QUESTION: 2 Which two elements are configured to implement dialing privileges in Cisco Unified Communication Manager? (Choose two)
A. Partitions
B. Route maps
C. Calling Search spaces
D. Firewall rules
E. Subnets
F. Access lists
G. Wildcard masks
H. Autonomous system numbers
Answer: A,C

NEW QUESTION: 3 You have an Azure web app named App1 that has two deployment slots named Production and Staging. Each slot has the unique settings shown in the following table. You perform a slot swap. What are the configurations of the Production slot after the swap? To answer, select the appropriate options in the answer area. NOTE: Each correction is worth one point.
Answer: Explanation: Explanation Which settings are swapped? When you clone configuration from another deployment slot, the cloned configuration is editable. Some configuration elements follow the content across a swap (not slot specific), whereas other configuration elements stay in the same slot after a swap (slot specific). The following lists show the settings that change when you swap slots.
Box 1 : On
Settings that are swapped:
General settings, such as framework version, 32/64-bit, web sockets
App settings (can be configured to stick to a slot)
Connection strings (can be configured to stick to a slot)
Handler mappings
Public certificates
WebJobs content
Hybrid connections *
Virtual network integration *
Service endpoints *
Azure Content Delivery Network *
Features marked with an asterisk (*) are planned to be unswapped. So web sockets settings will be swapped. So Production will have web sockets settings from "Off" to "On" after the swap slot.
Box 2: App1-prod.contoso.com
Settings that aren't swapped:
Publishing endpoints
Custom domain names
Non-public certificates and TLS/SSL settings
Scale settings
WebJobs schedulers
IP restrictions
Always On
Diagnostic settings
Cross-origin resource sharing (CORS)
So Custom domain names will not be swapped. So Production will have Custom domain names of its own after the swap slot.
