NEW QUESTION: 1Topic 1, Company OneThis question is one in a series of questions that all present the same scenario. For your convenience, thescenario is repeated in each question. (Click the Case Study button.)Each question presents a different goal and answer choices, but the text of the scenario is exactly the samein each question in this series.Users with newly deployed Windows 7 computers see a security prompt when they attempt to uploaddocuments to the company's intranet site.You need to suppress the prompt without creating a security risk for the company.What should you do? (Choose all that apply).Company, Inc. (Case Study):
BackgroundYou are the desktop architect for a company with 14,000 client computers. Some client computers are portable computers and some are desktop computers. All client computers currently run Windows XP.You are in the evaluation phase for upgrading to Windows 7. Approximately half of the Carlsbad and Madrid offices are used by sales employees. Sales employees report to the office only once per quarter. Your company has users in offices as shown in the following table.The address for the SharePoint site is <https://intranet.company.com>.Each location has gigabit network connections to the desktop except Madrid, which has 100 megabit connections. Each office has a Dynamic Host Configuration Protocol (DHCP) server and uses multiple VLANs.You use Group Policy objects (GPOs) to manage various settings. The following figure displays the Organizational Unit (OU) layout for the Active Directory Domain Services (AD DS) domain.Each office has two connections, a data center WAN link and an Internet connection. Each office connects to a central data center facility with connection speeds as shown in the following table.You currently use one of each client computer model to create and maintain a disk image for each model. The models supported by your company are listed in the following table.You currently use a third-party disk imaging application to capture and deploy new Windows XP computers. Desktop administrators use optical media to deploy the image to new or repurposed client computers. The current Windows XP image is about 11 GB in size, which includes 2 GB of

applications and 9 GB of Windows XP files.**Business Requirements**The deployment of Windows 7 must meet the following business requirements:**Deployment requirements**The deployment must maximize the use of existing client computers. The deployment must reduce the amount of time spent updating client computers after deployment.**Technical Requirements**The application must meet the following technical requirements:**Infrastructure requirements**The amount of disk space required to store deployment images must be reduced. The number of images that need to be copied across WAN links must be reduced. You are based in the Los Angeles office and use the Microsoft Deployment Toolkit. You have a file server hosting a deployment share in Los Angeles.**Application compatibility**All current applications must be supported on Windows 7.**All offices are moving to a new finance application in the next six months. The new finance application**installs and runs correctly on Windows 7.**Migration requirements**The deployment cannot require users to store their files on a network or external drive for the migration. Only system administrators can be allowed to install applications. User data must be migrated during upgrades to Windows 7. There is a small budget for hardware upgrades when required.**Image maintenance**You need to minimize the re-arm passes.**Security** Each location has a security group made up of the desktop computer objects in that location. Users must not be able to change their web browser or client computer security settings.**Your requirements are as follows:**A startup PIN and TPM are required for all BitLocker users.**Local regulations prohibit the use of BitLocker for all computers in the Munich office. This supersedes any other requirement.**All laptops within the company must have BitLocker enabled.**All Madrid desktops must have BitLocker enabled.**No other desktops besides Madrid should have BitLocker enabled.**Computers in office lobbies are not permitted to join the domain.**You need to block the use of ActiveX controls for all external websites.**A. Modify the default Windows 7 image to change the default Internet Explorer security level to Medium Low.****B. Modify the GPO to set the web server's NETBIOS name with a value of 2 in the Site to Zone Assignment List.****C. Modify the default Windows 7 image to add the Internet Explorer Enhanced Security Configuration component.****D. Create a GPO and link it to the root of the domain.****E. Modify the GPO to set https://intranet.company.com with a value of 1 in the Site to Zone Assignment List.****F. Modify the default Windows 7 image to disable the Internet Explorer Automatically Detect Intranet Network setting.****Answer: D,E**

NEW QUESTION: 2You create the new site for the Research subnet.You need to configure the replication infrastructure for the new site. The solution must meet the technical requirements. What should you do?**A. Between the Seattle site and the new research site, create a site link that has a cost of 10. Disable site link bridging.****B. Add the new research site to the DEFAULTIPSITLINK site link. Disable site link bridging.****C. Add the new research site to the DEFAULTIPSITLINK site link. Create a site link bridge.****D. Between the Seattle site and the new research site, create a site link that has a cost of 10. Create a site link bridge.****Answer: A**
Explanation:Explanation/Reference:Explanation:Implement an Active Directory site for the Research subnet. All Active Directory replication to the new site must occur within the Seattle office only.The Research site needs to connect to the Seattle site only so it needs its own site link. Site link bridging needs to be disabled to prevent the replication going through the Seattle site to the other sites.

NEW QUESTION: 3You have a deployment of System Center Configuration Manager (Current Branch).You need to create a list of client computers that lack the system resources required to upgrade Microsoft Office.Which two actions should you perform? Each correct answer presents part of the solution.**NOTE:** Each correct selection is worth one point.**A. Enable Active Directory System Discovery.****B. Configure auditing for the resource attributes on files.****C. Add a service connection point.****D. Enable Asset Intelligence hardware inventory reporting classes.****E. Add an Asset Intelligence synchronization point.****Answer: D,E**
