So you can trust us completely.

**NEW QUESTION: 1**In RSTP, which state do all ports initialize in? **A.** Designated **B.** Listening **C.** Forwarding **D.** Discarding **E.** Root **Answer: D**

**NEW QUESTION: 2**Which of the following types of attacks occurs when an attacker successfully inserts an intermediary software or program between two communicating hosts? **A.** Denial-of-service attack **B.** Password guessing attack **C.** Dictionary attack **D.** Man-in-the-middle attack **Answer: D**

**NEW QUESTION: 3**A company has 10 portable client computers that run Windows 10 Enterprise. The portable client computers have the network connections described in the following table. None of the computers can discover other computers or devices, regardless of which connection they use. You need to configure the connections so that the computers can discover other computers or devices only while connected to the CorpWired or CorpWifi connections. What should you do on the client computers? **A.** Turn on network discovery for the Public profile. **B.** For the CorpWired connection, select Yes, turn on sharing and connect to devices. **C.** Turn on network discovery for the Private profile. **D.** Change the CorpWired connection to public. Turn on network discovery for the Public profile. For the HotSpot connection, select No, don't turn on sharing or connect to devices. **E.** For the CorpWifi connection, select Yes, turn on sharing and connect to devices. **Answer: D**  
**Explanation:** Explanation/Reference: Explanation: Of the answers given, this is the only single answer that meets the requirements. Network discovery is a network setting that affects whether your computer can see (find) other computers and devices on the network and whether other computers on the network can see your computer. By default, Windows Firewall blocks network discovery, but you can enable it. When we change the CorpWired connection to public, all networks will be in the Public profile. Enabling network discovery for the Public profile will enable the computers to see other computers on each network (including HotSpot). To prevent network discovery on the HotSpot network, we can select No, don't turn on sharing or connect

to devices for that network. This will disable Network discovery for the computer's connection to the HotSpot network.

**NEW QUESTION: 4**You are developing a sales application that will contain several Azure cloud services and will handle different components of a transaction. Different cloud services will process customer orders, billing, payment inventory, and shipping. You need to recommend a solution to enable the cloud services to asynchronously communicate transaction information by using REST messages. What should you include in the recommendation?  
**A.** Azure Service Fabric  
**B.** Azure Notification Hubs  
**C.** Azure Queue storage  
**D.** Azure Data Lake  
**Answer: A**
