Our C-IEE2E-2404 guide torrent: SAP Certified Associate - Implementation Consultant - End-to-End Business Processes for the Intelligent Enterprise expect to help you get the exam certification with scientific method.

NEW QUESTION: 1 Refer to the exhibit. A frame on VLAN 1 on switch S1 is sent to switch S2 where the frame is received on VLAN 2. What causes this behavior?
A. VLANs that do not correspond to a unique IP subnet
B. native VLAN mismatches
C. trunk mode mismatches
D. allowing only VLAN 2 on the destination
Answer: B

NEW QUESTION: 2 Refer to Scenario 9. How large can the hash file grow?
A. 0B. **1C.** 2D. 3
Answer: A

NEW QUESTION: 3 Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2. On a server named Server2, you perform a Server Core Installation of Windows Server 2012 R2. You join Server2 to the contoso.com domain. You need to ensure that you can manage Server2 by using the Computer Management console on Server1. What should you do on Server2?
A. Run sconfig.exe

and configure the network settings.**B.** Run the Enable-NetFirewallRule cmdlet.**C.** Run sconfig.exe and configure remote management.**D.** Run the Disable-NetFirewallRule cmdlet.

Answer: BExplanation:Explanation/Reference:Explanation:As we can see on the following screenshot, Remote Management is enabled by default on a new Server Core installation of 2012 (so we don't have to configure it on Server2) BUT that's not enough as it only enables WinRM-based remote management (and computer management is not WinRM- based of course).To enable the remote management from an MMC (such as server manager, or computer manager), we have to enable exception rules in the Firewall, which can be done, amongst other ways, using Powershell and the Enable-NetFirewallRulecmdlet.

<http://technet.microsoft.com/en-us/library/jj554869.aspx>Enable-NetFirewallRuleDetailed DescriptionThe Enable-NetFirewallRulecmdlet enables a previously disabled firewall rule to be active within the computer or a group policy organizational unit. This cmdlet gets one or more firewall rules to be enabled with the Name parameter (default), the DisplayName parameter, rule properties, or by associated filters or objects. The Enabled parameter for the resulting queried rules is set to True.

NEW QUESTION: 4Which of the following is the PRIMARY benefit to an organization using an automated event monitoring solution?**A.** Improved response time to incidents**B.** Enhanced forensic analysis**C.** Reduced need for manual analysis**D.** Improved network protection**Answer:**

A
