Answer: C,FExplanation:From the output of show interface gigabitethernet 0/1 switchport command we can see this port is currently configured as trunked port (Operational Mode: trunk) and uses 802.1q encapsulation. So surely the "show vlan" command will not list this port -> C is correct.Also from the first output we learned the native VLAN is VLAN 1 (Trunking Native

Mode VLAN:1) so only traffic from this VLAN is sent untagged -> traffic sent from VLAN 2 out this port will have an 802.1q header applied -> F is correct.
