Pass VMware 2V0-12.24 Exam with Estruturit Actual Questions, However, you can't just take it for granted.

**NEW QUESTION: 1**When deploying redundant route reflectors in BGP, which attribute can you configure on the route reflector to allow routes to be identified as belonging to the same group?**A. ROUTER\_IDB. CLUSTER\_IDC. ORIGINATOR\_IDD. PEER\_GROUP****Answer: B****Explanation:** Explanation/Reference:Explanation:Together, a route reflector and its clients form a cluster. When a single route reflector is deployed in a cluster, the cluster is identified by the router ID of the route reflector. The bgp cluster-id command is used to assign a cluster ID to a route reflector when the cluster has one or more route reflectors. Multiple route reflectors are deployed in a cluster to increase redundancy and avoid a single point of failure. When multiple route reflectors are configured in a cluster, the same cluster ID is assigned to all route reflectors.This allows all route reflectors in the cluster to recognize updates from peers in the same cluster and reduces the number of updates that need to be stored in BGP routing tables.
