Choosing ISQI prep4sure pdf means choosing success, **CTFL_Syll_4.0 Valid Exam Braindumps** In addition, our company has carried out cooperation with the trustworthy payment platform.

NEW QUESTION: 1 "Statement": [{"Sid": "Stmt1388811069831", "Effect": "Allow", "Principal": {"AWS": "*"}, "Action": ["s3:GetObjectAcl", "s3:ListBucket"], "Resource": ["arn:aws:s3:::cloudacademy"]}]. Option B. Option C. Option D. Option A. **Answer: C**
Explanation: Explanation A sysadmin can grant permission to the S3 objects or the buckets to any user or make objects public using the bucket policy and user policy. Both use the JSON-based access policy language. Generally if the user is defining the ACL on the bucket, the objects in the bucket do not inherit it and vice a versa. The bucket policy can be defined at the bucket level which allows the objects as well as the bucket to be public with a single policy applied to that bucket. In the sample policy the action says "S3:ListBucket" for effect Allow on Resource arn:aws:s3:::cloudacademy. This will make the cloudacademy bucket public.
"Statement": [{"Sid": "Stmt1388811069831", "Effect": "Allow", "Principal": {"AWS": "*"}, "Action": ["s3:GetObjectAcl", "s3:ListBucket"], "Resource": ["arn:aws:s3:::cloudacademy"]}]

NEW QUESTION: 2 The company you work for has a huge amount of infrastructure built on AWS. However there has been some concerns recently about the security of this infrastructure, and an external auditor has been given the task of running a thorough check of all of your company's AWS assets. The auditor will be in the USA while your company's infrastructure resides in the Asia Pacific (Sydney) region on AWS. Initially, he needs to check all of your VPC assets, specifically, security groups and NACLs. You have been assigned the task of providing the auditor with a login to be able to do this. Which of the following would be the best and most secure resolution to provide the auditor with so he can begin his initial investigations? Choose the correct answer from the options below. **A.** Create an IAM user tied to an administrator role. Also provide an additional level of security with MFA. **B.** Give him root access to your AWS Infrastructure, because he is an auditor he will need access to every service. **C.** Create an IAM user who will have read-only access to your AWS VPC infrastructure and provide the auditor with those credentials. **D.** Create an IAM user with full VPC access but set a condition that will not allow him to modify anything if the request is from any IP other than his own. **Answer: C**
Explanation: Explanation Generally you should refrain from giving high level permissions and give only the required permissions. In this case option C fits well by just providing the relevant access which is required. For more information on IAM please see the below link: *
<https://aws.amazon.com/iam/>

NEW QUESTION: 3 A. Option B B. Option D C. Option E D. Option A E. Option C **Answer: E**
Explanation: Use "show run" command to show. The left Vlan102 is console1 of DS1. Priority value is 200, we should decrement value in the track command from 11 to 18. Because $200 - 11 = 189 < 190$ (priority of Vlan102 on DS2).

NEW QUESTION: 4 Which three options are basic design principles of the Cisco Nexus 7000 Series for data center virtualization? (Choose three.) A. infrastructure scalability B. upgrade of technology C. operational continuity D. easy management E. cost minimization F. transport flexibility **Answer: A,C,F**
