We have three versions for you to meet your different needs.

NEW QUESTION: 1A database administrator added a DB2 database that is being backed up online through the Avamar DB2 plug-in.They have been instructed to shorten the backup time of the database due to the Avamar backup window being quite full when the backup takes place.To accomplish this, they have excluded the archive logs from the dataset.What else must the administrator do to ensure that no data loss occurs in the event they need to restore the database?**A.** Perform an offline backup of the database.**B.** Perform an offline backup of the archive logs using the DB2 plug-in.**C.** Include the archive logs in the file system backup.**D.** Back up the archive logs separately using the DB2 plug-in.**Answer: C**

NEW QUESTION: 2If the IP address requested by the DHCP client is already occupied, which packet will the DHCP server use as the response?**A.** DHCP ACK**B.** DHCP NAK**C.** DHCP DISCOVER **D.** DHCP RELEASE**Answer: B**

NEW QUESTION: 3**A.** Option DB. **B.** Option AC. **C.** Option CD. **D.** Option B**Answer: B****Explanation:** Explanation* Creating a PDBRather than constructing the data dictionary tables that define an empty PDB from scratch, and then populating its Obj\$ and Dependency\$ tables, the empty PDB is created when the CDB is created. (Here, we use empty to mean containing no customer-created artifacts.) It is referred to as the seed PDB and has the name PDB\$Seed.Every CDB non-negotiably contains a seed PDB; it is non-negotiably always open in read-only mode. This has no conceptual significance; rather, it is just an optimization device. The create PDB operation is implemented as a special case of the clone PDB operation. The size of the seed PDB is only about 1 gigabyte and it takes only a few seconds on a typical machine to copy it.
