NEW QUESTION: 1Scenario Following the merger of two financial companies, management is considering combining the two distinct customer call centers into a single physical location. In addition to the overall call center headcount increasing by 30%, the support for two distinct customer bases presents the potential of having two different desktop PCs on the desk of each call center employee. Instead of correspondingly increasing IT support headcount to manage the single, larger call center and call center infrastructure, management believes they can reduce the required time to support call center operations by 40% if they employ virtual desktop technology. An initial assessment has identified the need for a centralized storage solution that could support 500 virtual desktops running a variety of applications that can scale quickly to accommodate an expected increase in call center staff. The customer is already an HP Blade System customer using HP Virtual Connect Flex-10. Some of the additional business criteria identified in customer planning interviews includes: -Use client virtualization for the desktops. -Achieve the highest possible density and performance for the virtual desktops, but keep the virtual desktop storage traffic off the network due to a current, existing limitation of only 1GbE. -Do not use standalone, network-attached storage. -Limit the impact of additional rack space. -Minimize the risk of additional help-desk tickets. -Present multiple solutions, prioritized with a recommendation. Refer to the scenario. Your proposed design includes a VMware View environment using HP StoreVirtual 4800. What has to be considered when designing a solution? **A.** Offer asynchronous replication to keep the virtual desktops up and running in case of a component failure. **B.** Avoid boot storms and insufficient response times during critical shift change hours. **C.** Include HP virtual Connect FlexFabric to connect to the HP StoreVirtual environment. **D.** Use VMware View provisioning servers outside the blade to minimize LAN traffic to the enclosure. **Answer: B** Explanation: HP P4800 G2 31.5TB SAS SAN Blade System Capacity 31.5TB Starting, 504TB Maximum Drive description (70) LFF SAS Host interface 10 GbE iSCSI (4) Ports Replication support SAN/iQ Remote Copy Asynchronous Replication with Bandwidth Throttling; Multi-Site/Disaster Recovery Thin provisioning support SAN/iQ Thin Provisioning www.hp.com/go/P4000Compatibility www.hp.com/go/P4000Compatibility Hyperlink VMware@ Horizon View (formerly VMware View) is a virtual desktop infrastructure solution that simplifies desktop The customer is already an HP Blade System customer using HP Virtual Connect Flex-10 (Not It makes no sense answer

D), HP Virtual Connect Flex-10 10Gb Ethernet Modules for c-Class BladeSystem simplify networks by reducing cables without adding switches to manage; They provide 4:1 consolidation of interconnect equipment: Each VC Flex-10 module can replace up to four Ethernet switches supporting data and iSCSI storage traffic. A "boot storm" is the tremendous performance drain experienced when hundreds or thousands of users logon at, or near, the same time in VDI environments. The drag on network throughput, host performance and SAN I/O can be devastating to an unprepared VDI installation. Some of the pressure can be eased by building the environment according to some best practices laid out by virtualization vendors. But, there are a few areas that you might not have considered when constructing your VDI infrastructure.
