NEW QUESTION: 1 Q, R, S, and T are four consecutive positive numbers. Which of the following expressions must be odd?**A.** $QR + ST$.**B.** $Q^2 + S^3$.**C.** $Q^2 + 2R^2$.**D.** $Q + R + S + T$.**E.** $Q^2 + R^2$.**Answer: E**
Explanation:Explanation/Reference:Explanation:You can ignore the powers since odds and evens remain as they were under powers. Q and R are consecutive numbers and therefore one of them is even and the other one is odd. The result of the sum of an even number and an odd number must be an odd number.

す。 **Answer:** Explanation:ExplanationRead Uncommitted (aka dirty read): A transaction T1 executing under this isolation level can access data changed by concurrent transaction(s). Pros: No read locks needed to read data (i.e. no reader/writer blocking). Note, T1 still takes transaction duration locks for any data modified. Cons: Data is not guaranteed to be transactionally consistent. Read Committed: A transaction T1 executing under this isolation level can only access committed data. Pros: Good compromise between concurrency and consistency. Cons: Locking and blocking. The data can change when accessed multiple times within the same transaction. Repeatable Read: A transaction T1 executing under this isolation level can only access committed data with an additional guarantee that any data read cannot change (i.e. it is repeatable) for the duration of the transaction. Pros: Higher data consistency. Cons: Locking and blocking. The S locks are held for the duration of the transaction that can lower the concurrency. It does not protect against phantom rows. Serializable: A transaction T1 executing under this isolation level provides the highest data consistency including elimination of phantoms but at the cost of reduced concurrency. It prevents phantoms by taking a range lock or table level lock if range lock can't be acquired (i.e. no index on the predicate column) for the duration of the transaction. Pros: Full data consistency including phantom protection. Cons: Locking and blocking. The S locks are held for the duration of the transaction that can lower the concurrency.
