NEW QUESTION: 2Your network contains a single Active Directory domain. You plan to deploy System Center 2012 Configuration Manager. The hierarchy will have a Central Administration Site and five primary sites. You need to ensure that you can target user groups for software distribution. The solution must minimize network traffic. Which Configuration Manager discovery method should you use? **A.** Active Directory User Discovery on the primary sites and Active Directory Group Discovery on every site **B.** Active Directory User Discovery on the primary sites **C.** Active Directory User Discovery on the Central Administration site and Active Directory Group Discovery on the primary sites **D.** Active Directory User Discovery and Active Directory

Group Discovery on the Central Administration site
Answer: D
Explanation/Reference: Self Explanatory

NEW QUESTION: 3 Your network contains two servers named Server1 and Server2 that run Windows Server 2012 R2. Both servers have the Hyper-V server role installed. Server1 and Server2 are located in different offices. The offices connect to each other by using a high-latency WAN link. Server2 hosts a virtual machine named VM1. You need to ensure that you can start VM1 on Server1 if Server2 fails. The solution must minimize hardware costs. What should you do?
A. On Server2, install the Multipath I/O (MPIO) feature. Modify the storage location of the VHDs for VM1.
B. From the Hyper-V Settings of Server2, modify the Replication Configuration settings. Enable replication for VM1.
C. From the Hyper-V Settings of Server1, modify the Replication Configuration settings. Enable replication for VM1.
D. On Server1, install the Multipath I/O (MPIO) feature. Modify the storage location of the VHDs for VM1.
Answer: C
Explanation/Reference: Explanation: You first have to enable replication on the Replica server--Server1--by going to the server and modifying the "Replication Configuration" settings under Hyper-V settings. You then go to VM1--which resides on Server2-- and run the "Enable Replication" wizard on VM1.

NEW QUESTION: 4 A security administrator would like to ensure that system administrators are not using the same password for both their privileged and non-privileged accounts. Which of the following security controls BEST accomplishes this goal?
A. Require shorter password expiration for non-privileged accounts
B. Require different account passwords through a policy
C. Require a greater password length for privileged accounts
D. Require shorter password expiration for privileged accounts
Answer: B
Explanation: A password policy aka account policy enforcement can be configured in such a way so as to make sure that system administrators make use of different passwords for different accounts. Incorrect Answers: B. Password expiration does not enforce the use of different passwords for different accounts. It is used as a disablement tool. C. Shorter password expiration is still just a disablement tool and will not enforce the use of different passwords for different accounts. D. Password length serves to make it more complex so as to strengthen the password and not to enforce the use of different passwords for different accounts.
