Download latest 112-51 Exam Dumps for the Network Defense Essentials (NDE) Exam exam in PDF file format.

**NEW QUESTION: 1** Fill in the blank. In New Mode HA, the internal cluster IP VIP address is 10.4.8.3. The internal interfaces on two members are 10.4.8.1 and 10.4.8.2 Internal host 10.4.8.108 pings 10.4.8.3, and receives replies. Review the ARP table from the internal Windows host 10.4.8.108. According to the output, which member is the standby machine? **Answer:** Explanation: 10.4.8.1

**NEW QUESTION: 2** CORRECT TEXT Type the command and syntax to view critical devices on a cluster member in a ClusterXL environment. **Answer:** Explanation: cphaprob -ia list

**NEW QUESTION: 3** A. Option CB. Option DC. Option AD. Option B **Answer: D** Explanation: Explanation A NAS is an inexpensive storage solution suitable for small offices. Individual files can be encrypted by using the EFS (Encrypted File System) functionality provided by the NTFS file system. NAS typically uses a common Ethernet network and can provide storage services to any authorized devices on that network. Two primary NAS protocols are used in most environments. The choice of protocol depends largely on the type of computer or server connecting to the storage. Network File System (NFS) protocol usually used by servers to access storage in a NAS environment. Common Internet File System (CIFS), also sometimes called Server Message Block (SMB), is usually used for desktops, especially those running Microsoft Windows. Unlike DAS and SAN, NAS is a file-level storage technology. This means the NAS appliance maintains and controls the files, folder structures, permission, and attributes of the data it holds. A typical NAS deployment integrates the NAS appliance with a user database, such as Active Directory, so file permissions can be assigned based on established users and groups. With Active Directory integration, most Windows New Technology File System (NTFS) permissions can be set on the files contained on a NAS device.
