**NEW QUESTION: 1**A technician wants to see if the computer has a route to a remote network. Which of the following commands will display the routing table of the PC?**A.** nbtstat**B.** netstat**C.** ipconfig**D.** pathping**Answer: B**

**NEW QUESTION: 2**Instructions:Enter IOS commands on the Dubai router to verify network operation and answer for multiple-choice questions. THIS TASK DOES NOT REQUIRE DEVICE CONFIGURATION.Click on the Console PC to gain access to the console of the router. No console or enable passwords are required.To access the multiple-choice questions, click of the numbered boxes on the left of the top panel.If required, what password should be configured on the DeepSouth router in the branch office to allow a connection to be established with the MidEast router?**A.** No password is required.**B.** Telnet**C.** Console**D.** Enable**E.** Secret**Answer: D**  
Explanation:In the diagram, DeepSouth is connected to Dubai's S1/2 interface and is configured as follows:Interface Serial1/2IP address 192.168.0.5 255.255.255.252Encapsulalation PPP; Encapsulation for this interface is PPPCheck out the following Cisco Link:Here is a snip of an example:Network DiagramIf Router 1 initiates a call to Router 2, Router 2 would challenge Router 1, but Router 1 would not challenge Router 2. This occurs because the ppp authentication chap calling command is configured on Router 1. This is an example of a unidirectional authentication. In this setup, the ppp chap hostname alias-r1 command is configured on Router 1. Router 1 uses "alias-r1" as its hostname for CHAP authentication instead of "r1." The Router 2 dialer map name should match Router 1's ppp chap hostname; otherwise, two B channels are established, one for each direction.Reference:
