**NEW QUESTION: 1**Which two statements are true about AAA? (Choose two.)**A.** AAA can use RADIUS, TACACS+, or Windows AD to authenticate users.**B.** AAA can be used to authenticate the enable password with a AAA server.**C.** If the local keyword is not included and the AAA server does not respond, then authorization will never be possible and the connection will fail.**D.** If RADIUS is the only method configured in AAA, and the server becomes unreachable, the user will be able to log in to the router using a local username and password.**Answer: B,C**

Explanation:AAA can be used to authenticate user login and the enable passwords.Example 1: Same Exec Authentication Methods for All UsersOnce authenticated with:aaa authentication login default group radius localAll users who want to log in to the access server have to be authorized using Radius (first method)or local database (second method).We configure:aaa authorization exec default group radius localNote. On the AAA server, Service-Type=1 (login) must be selected.Note. With this example, if the local keyword is not included and the AAA server does not respond,then authorization will never be possible and the connection will fail.
