Many users who have easily pass C\_HAMOD\_2404 exam with our C\_HAMOD\_2404 exam software of Estruturit, In other words, what C\_HAMOD\_2404 exam cram sends you besides a certification **New C\_HAMOD\_2404 Exam Vce** but it brings you to the higher position, higher salary even brighter future.

SAP SAP Certified Associate - Data Engineer - SAP HANA.

**NEW QUESTION: 1** Which of the following tools is an open source network intrusion prevention and detection system that operates as a network sniffer?  
**A. Snort**  
**B. Swatch**  
**C. TimberseeD. IPLog**  
**Answer: A**

**NEW QUESTION: 2** Testlet: Woodgrove Bank  
You need to recommend a solution for managing the shared folders that meets the company's technical requirements. What should you include in the recommendation?  
Case Study Title (Case Study): COMPANY OVERVIEW  
Overview  
Woodgrove Bank is an international financial organization. Physical Location  
The company has a main office and multiple branch offices. EXISTING ENVIRONMENT  
Active Directory Environment  
The network contains one Active Directory forest. A separate domain exists for each office. Network Infrastructure  
All offices have domain controllers that are configured as DNS servers. All client computers are configured to connect to the DNS servers in their respective office only. The main office has the following servers and client computers:  
One Windows Server Update Services (WSUS) server. Client computers that run either Windows XP Service Pack 3 (SP3) or Windows 7. Ten file servers host multiple shared folders. The file servers run either Windows Server 2003 or Windows Server 2008 R2. One domain-based Distributed File System (DFS) namespace that has two replicas. The DFS servers run Windows Server 2008 R2. The DFS namespace is configured to use Windows 2000 Server mode. Each branch office has a WAN link to the main office. The WAN links are highly saturated. Each office has a dedicated high-speed Internet connection. All of the client computers in the branch offices run Windows 7. User Problems  
Users report that it is difficult to find the shared folders on the network. REQUIREMENTS  
Planned Changes  
Woodgrove Bank plans to implement the following changes:  
Deploy a new application named App1 on each client computer. App1 has a Windows Installer package and is compatible with Windows XP, Windows Vista, and Windows 7. Designate a user in each office to manage the address information of the user accounts in that office. Deploy a new branch office named Branch22 that has the following servers: One file server named Server1 & Two domain controllers named DC10 and DC11 that are configured as DNS servers. Technical Requirements  
Woodgrove Bank must meet the following technical requirements:  
Minimize hardware and software costs, whenever possible. Encrypt all DNS replication traffic

between the DNS servers. Ensure that users in the branch offices can access the DFS targets if a WAN link fails. Ensure that users can only view the list of DFS targets to which they are assigned permissions. Minimize the amount of network traffic between the main office and the branch offices, whenever possible. Minimize the amount of name resolution traffic from the branch offices to the DNS servers in the main office. Ensure that the administrators in the main office manage all Windows update approvals and all computer groups. Manage all of the share permissions and the folder permissions for the file servers from a single management console. Ensure that if a file on a file server is deleted accidentally, users can revert to a previous version of the file without administrator intervention. Ensure that administrators are notified by e-mail each time a user successfully copies a file that has an .avi extension to one of the file servers.

**Security Requirements** Woodgrove Bank must meet the following security requirements: Access rights and user rights must be minimized. The Guest account must be disabled on all servers. Internet Information Services (IIS) must only be installed on authorized servers.

**A. File Server Resource Manager (FSRM)**  
**B. Storage Explorer**  
**C. Computer Management**  
**D. Share and Storage Management**

**Answer: C**  
**Explanation:** Explanation/Reference: As 10 file servers hosting multiple shared folders run either Windows Server 2003 or Windows Server 2008 R2, Computer Management is the preferred console instead of Share and Storage Management.

**NEW QUESTION: 3** You are developing an application. You have an Azure user account that has access to two subscriptions. You need to retrieve a storage account key secret from Azure Key Vault. In which order should you arrange the PowerShell commands to develop the solution? To answer, move all commands from the list of commands to the answer area and arrange them in the correct order.

**Answer:** Explanation: Explanation  
Step 1: Get-AzSubscription  
If you have multiple subscriptions, you might have to specify the one that was used to create your key vault. Enter the following to see the subscriptions for your account: Get-AzSubscription  
Step 2: Set-AzContext -SubscriptionId  
To specify the subscription that's associated with the key vault you'll be logging, enter: Set-AzContext -SubscriptionId <subscriptionID>  
Step 3: Get-AzStorageAccountKey  
You must get that storage account key. Step 4: \$secretvalue = ConvertTo-SecureString <storageAccountKey> -AsPlainText -Force  
Set-AzKeyVaultSecret -VaultName <vaultName> -Name <secretName> -SecretValue \$secretvalue  
After retrieving your secret (in this case, your storage account key), you must convert that key to a secure string, and then create a secret with that value in your key vault. Step 5: Get-AzKeyVaultSecretNext, get the URI for the secret you created. You'll need this URI in a later step to call the key vault and retrieve your secret. Run the following PowerShell command and make note of the ID value, which is the secret's URI: Get-AzKeyVaultSecret -VaultName <vaultName>  
Reference: <https://docs.microsoft.com/bs-latn-ba/Azure/key-vault/key-vault-key-rotation-log-monitoring>

**NEW QUESTION: 4** **A.** cat /etc/shadow | grep jack  
**B.** cat /etc/passwd | grep jack  
**C.** cat /etc/group | grep jack  
**D.** cat /etc/default/passwd | grep jack

**Answer: B**  
**Explanation:** The /etc/passwd contains one entry per line for each user (or user account) of the system. All fields are separated by a colon (:) symbol. Total seven fields as follows.

- 1 . Username: It is used when user logs in. It should be between 1 and 32 characters in length.
- 2 . Password: An x character indicates that encrypted password is stored in /etc/shadow file.
3. User ID (UID): Each user must be assigned a user ID (UID). UID 0 (zero) is reserved for root and UIDs 1-99 are reserved for other predefined accounts. Further UID 100-999 are reserved by system for administrative and system accounts/groups.
4. Group ID (GID): The primary group ID (stored in /etc/group file)
5. User ID Info: The comment field. It allow you to add extra information about the users such as user's full name, phone number etc. This field use by finger command.
- 6 . Home directory: The absolute path to the directory the user will be in when they log in. If this directory does not exists then users directory becomes /7 . Command/shell: The absolute path of a command or shell (/bin/bash). Typically, this is a shell. Please note that it does not have to be a shell.
