NEW QUESTION: 2IPSec Encapsulating Security Payload uses what IP protocol number?A. 0B. 1C. 2D. 3Answer: D

NEW QUESTION: 3Auto Scaling 그룹은 원하는 용량 5 인스턴스로 실행 중이며 Cloudwatch 경보에서 트리거를 수신하여 용량을 1 씩 증가시킵니다. 냉각 시간은 5 분입니다. Cloudwatch는 2 분 후에 다른 트리거를 보내 원하는 용량을 1만큼 줄입니다.4 분 후 인스턴스 수는 얼마입니까?**A. 0B. 1C. 2D. 3Answer: D**

Explanation:The cool down period is the time difference between the end of one scaling activity (can be start or terminate) and the start of another one (can be start or terminate). During the cool down period, Auto Scaling does not allow the desired capacity of the Auto Scaling group to be changed by any other CloudWatch alarm. Thus, in this case the trigger from the second alarm will have no effect.

NEW QUESTION: 4A. Option FB. Option EC. Option BD. Option AE. Option DF. Option CAnswer: A,FEExplanation:ExplanationNetwork devices come with default credentials, the username and password that enables you to log into the device for configuration. Changing default credentials should be the first step in hardening a new device. As with any other system, avoiding common passwords adds security.Keep network devices up to date. That means upgrading firmware, patching and updating as necessary to close any security gaps exposed over time.Services on network devices like routers include common things, like Telnet and HTTP access; and also things you don't normally see, like TCP and UDP small services, debugging and testing tools that primarily use ports 20 and lower. If enabled, these services can be used to launch DoS and other attacks. All modern Cisco devices have these disabled; Cisco's hardening rules insist on disabling unnecessary services.Using secure protocols hardens network devices. Don't use Telnet to access a managed switch or router, for example, but use SSH so that the communication is encrypted.Disabling unused ports on network devices enhances port security for access control.This includes standard IP ports and device ports, both physical and virtual for the latter.
